B Tools: Atelier B & ProB

- **Accessing B Tools via AppsAnywhere**

  Atelier B & **ProB** are available from the **AppsAnywhere** application.

  So they can be accessed either via the University's Windows PCs, or from your own **Windows** computer, see School's AppsAnywhere Tech Support https://support.ecs.westminster.ac.uk/w/index.php/AppsAnywhere

  The login for AppsAnywhere is: https://appsanywhere.westminster.ac.uk/

  Unfortunately, Linux & iOS users cannot access the tools via AppsAnywhere.
  So they will have to download their own copies of the tools, see below.

- **Accessing B Tools on School's Ubuntu System**

  Atelier B & **ProB** are installed on the University's ***Ubuntu*** system.

  This is accessed via ***ORACLE****'s Secure Global Desktop* web site to login to the University's ***Ubuntu*** system. Full details of how to do this are given here.

- **Online Help & Manuals for the B Tools**

  Both tools provide in tool help under their ***Help*** menus, as well as standalone manuals:

  - **Atelier B** User Manual (Version 4.0) [PDF]
  - **ProB** Tutorials & User Manual [Online]

- **B Tool Download Web Sites**

  The B tools can be downloaded for Windows, Linux, MacOSX from the following sites:

  - **Atelier B**: https://www.atelierb.eu/en/download/

  - **ProB**: https://www3.hhu.de/stups/prob/index.php/Download

    Note: that **ProB** also requires you to install **Tcl/Tk 8.5** to run. This can be download from the same page as **ProB**.

  - **Graphviz:** is a "dot" graph Viewer Program. This is used to view the ".dot" files that **ProB** generates.

It can be downloaded
from: https://graphviz.org/download/

See also the "About" page https://graphviz.org/about/, for other version that are available.

- **WebGraphviz:** http://webgraphviz.com/

  A very basic version of Graphviz in a browser. All it can do is display the graph represented by a ".dot" file.

  To use it:

  1. Go to the web site & delete the content of the "Text Area" box.
  2. Open the specification's animation history "**.dot**" file (in same directory as the specification) in a text editor.
  3. "Select All" in the editor & copy it.
  4. Paste it into the "Text Area" box.
  5. Then press the "Generate Graph!" button.
  6. The graph is then displayed below the "Text Area" box.

  Try it using this dot file: Welcome.dot

- **Viz.js:** http://viz-js.com/

  Similar to Graphviz, i.e. a basic version of Graphviz in a browser. Use it in the same way, except press "Enter" after pasting in the ".dot" file.
